Senior Analytics Engineer | Senior Data Analyst | Modern Data Stack

Senior Analytics Engineer and Data Analyst with 12+ years of experience designing data transformation layers, building analytics data models, and delivering trusted insights for Fortune 100 organizations. Proven expertise in SQL-based transformation pipelines, ELT architecture, semantic layer design, and modern data stack practices, including dbt-aligned modeling, Dagster orchestration, and Snowflake-compatible workflows. Career built across cloud analytics, BI development, and enterprise automation — with a consistent record of enabling significant cost savings, accelerating decision-making, and bridging the gap between engineering and business stakeholders. Rapid learner who has shipped production-ready solutions in Java (5 months), QlikView (6 months), and Russian (C1 in 2 years).

- ✓ **Identified \$100K+ in annual cloud cost savings** through Azure Cost Management analytics and Power BI reporting delivered to Fortune 100 clients.
- ✓ **Designed SQL-based transformation layers and analytics data models** aligned with dbt principles, including modular models, reusable logic, and dependency management, to ensure consistent business metrics across reporting.
- ✓ **Built and maintained data architectures for 5+ enterprise customers** using Microsoft Fabric, OneLake, Notebooks, and Power Query, supporting scalable ELT pipelines and semantic layer design.
- ✓ **Maintained a 100+ Fortune company Excel/VBA application** used by Coca-Cola, Microsoft, AWS, and Pepsi, generating six-figure cost savings through automation and multi-source data integration.
- ✓ **Saved 75+ hours per week at Hewlett-Packard** by implementing 10+ automated reporting and accounting pipeline improvements using Excel VBA and SharePoint.
- ✓ **Delivered BI and analytics solutions for 800+ end-users** across sales, HR, and finance functions, combining QlikView, Power BI, SQL, and stakeholder alignment to drive adoption.
- ✓ **Leveraged AI coding agents (GitHub Copilot, OpenAI Codex, Anthropic)** to accelerate development cycles and increase output velocity across data modeling and transformation work.

Core Competencies

Data Pipeline Optimization • Data Quality & Governance • Metadata Management • Data Architecture Design
Business Metrics Standardization • Insight Delivery & Reporting Strategy • Performance Optimization • Data Validation Frameworks
Cross-Functional Collaboration • Requirements Translation • Scalable Solution Design • Analytics Enablement

PROFESSIONAL EXPERIENCE

Vnomic | Remote — San Francisco, CA (USA) **2018 — Present**

Software Engineer / Analytics Engineer / Business Intelligence Analyst / Excel & VBA Developer

Software company specializing in cloud migration tooling and enterprise analytics, serving Fortune 100 clients globally.

- Designed and optimized SQL-based transformation layers aligned with dbt principles, **improving data consistency and reducing reporting discrepancies by up to 90%** across enterprise analytics environments.
- Engineered scalable data pipeline architecture handling 20GB/month of raw data, **reducing storage footprint from 200GB+ annually to ~15GB/year** through parquet-based compression strategies and modular ELT design.
- Automated recurring data pipelines and reporting workflows, saving ~40 hours per month and reducing deployment cycles from weeks to minutes through streamlined orchestration and reproducible environments.
- Built and deployed analytics data models and semantic layers for **5 enterprise clients** (100% adoption), enabling standardized KPI definitions and consistent reporting across stakeholders.
- Developed Azure Cost Management analytics models comparing pricing sheets, discount structures, and usage patterns, **identifying \$100K+ in recurring cost savings** through a repeatable optimization framework.
- Constructed and delivered full modern data stack architectures leveraging **Microsoft Fabric, OneLake, Power BI, SQL, PostgreSQL, and Git-based workflows**, supporting scalable analytics use cases across multiple environments.
- Implemented performance-optimized ELT workflows with separation of ingestion and transformation layers, enabling future scalability to distributed systems (e.g., Spark-based processing).
- **Maintained and enhanced enterprise-grade Excel/VBA analytics tooling used by 100+ Fortune companies**, automating multi-source data integration and delivering six-figure operational cost impact.
- Leveraged AI-assisted development tools (**GitHub Copilot, OpenAI Codex, Anthropic**) to accelerate data modeling and pipeline development, increasing engineering velocity and reducing manual coding effort.

PROFESSIONAL EXPERIENCE (CONT.)

Expert 4 Business | City, ST2017 — 2018

Senior IT Systems Analyst

IT consulting firm — promoted to Senior Systems Analyst in 7 months.

- Standardized processes across 9 HR and accounting teams, driving ~40% efficiency improvement through workflow redesign, documentation, and system alignment initiatives.
- Developed and deployed reporting and automation solutions supporting ~50 end-users, reducing manual workload by an estimated ~60% through Excel, Access, VBA, and BI tooling.
- Led cross-functional change management efforts, increasing adoption of new systems through targeted training sessions, one-on-one coaching, and stakeholder education strategies.

Impel Group | City, ST2014 — 2017

Business & Sales Analyst / QlikView Developer

Business services and outsourcing group.

Delivered business intelligence and analytics solutions within a large-scale outsourcing organization, supporting 800+ end-users across 50+ business units with centralized access to sales, financial, and operational data. Improved reporting efficiency by 20–35% and eliminated data silos by integrating data from SAP, Excel, CSV, and CRM systems, achieving 100% data accessibility across the organization. Automated profit and loss reporting for 50+ subsidiary companies and streamlined reporting workflows, saving 20+ hours per week while enabling faster, data-driven decision-making across leadership teams.

Hewlett-Packard | City, ST2013 — 2014

IT Expert / Accounts Payable Specialist

HP Global Business Center — Russia Finance Department.

Supported high-volume accounts payable and financial reporting operations within HP’s Global Business Center, processing up to 100 invoices per day across accounting and VAT teams. Improved operational efficiency by automating workflows using Excel VBA and Access, saving 75+ hours per week, increasing processing capacity from 40 to 100 invoices daily (150% increase), reducing errors by ~50%, and accelerating processing speed by ~30% to enhance overall financial accuracy and reporting timelines.

TECHNICAL STACK

- Analytics Engineering:** dbt (modeling principles), Dagster (orchestration), ELT architecture, Snowflake, PostgreSQL, SQL Server
- Business Intelligence:** Power BI (Senior), QlikView (Senior), Power Query (Senior), Paginated Reports, Microsoft Fabric, OneLake
- Programming & Automation:** SQL, Python (Pandas — Mid), VBA (Senior), Java (Mid), MS Access, Excel
- Cloud & Infrastructure:** Azure Cloud Analytics, Azure Cost Management, Git, SharePoint, OneLake
- AI-Assisted Development:** GitHub Copilot, OpenAI Codex, Anthropic Claude — used to accelerate data modeling, transformation, and pipeline delivery
- Collaboration:** Jira, MS Teams, Google Workspace, Agile Remote Delivery
- Languages:** English (C1) | Russian (B2) | German (A2) | Polish (C2)

EDUCATION & CERTIFICATIONS

Wroclaw University of Environmental and Life SciencesCompleted

Master of Science: Environmental Engineering

Certifications:

Power BI UI Dashboards (2025) | Complete QlikView Bootcamp (2022) | Microsoft Power BI — Maven Analytics (2022)
